

Control Panels

Features:

- PLC/Computer controls
- Monitors
- Touch screen devices
- Software from manufacturers such as Allen Bradley, Automation Direct, and National Instruments

Automation:

- Hydraulic lifting
- Variable speed control
- Vessel Vacuum
- Vessel Pumping

Product Specifications

Control Panels are customized for each application

Panels can be mounted on equipment or stand-alone

MorehouseCowles, a leader in mixing, dispersing, and milling equipment offers the latest in UL compliant control systems technology. Processes requiring precision measurement and control of time, temperature, pressure, and environment will benefit from our control technology.

MorehouseCowles can customize each control panel to fit the equipment to a specific process and design control panels to operate independently, or interface with Automation Software. Using PLC (Programmable Logic Control) integrated with switches and sensing technology, our control panels can handle even the most complex processes. The software interfaces, in addition to process automation, can provide quality control measures and critical yield measurement data.

Our equipment also utilizes the latest monitor and touch pad devices where applicable.

MorehouseCowles control panels can automate functions such as hydraulic lifting, intermediate pumping, variable speed controls, and vessel purging at a safe distance from the mixer, disperser, or mill. Large-scale processes can benefit from our top of the line control systems. Like MorehouseCowles equipment, our control systems are designed to last and built to handle most processing environments. Control systems can also be built to meet hazardous area classification ratings as necessary.

Contact MorehouseCowles to find out how our automation systems can streamline your processes.
